

Collibra Professional Services

Expert advisory and implementation services

The Collibra Professional Services team provides expert advisory and implementation services, drawing on years of experience working with the global community of Data Citizens. We'll partner with you to drive success with your initial use cases and accelerate time-to-value of your organization's Data Intelligence initiatives.

- Advisory services augment your organization's experience and expertise by providing an external industry perspective to advise you on your data initiatives.
- Implementation services use our proven methodology to help you get started quickly and successfully with Collibra.

Benefits

Work with the experts

Partner with certified Collibra Rangers with deep experience across industries and use cases

Build for the future

Gain knowledge and expertise that helps sustain and grow your Data Intelligence initiatives

Leverage best practices

Build on best practices and learnings from our work with leading, global organizations — ensuring your Collibra platform is configured for current and future use cases from the start

Accelerate implementation

Benefit from a proven, deliverable-oriented methodology that streamlines implementation projects, gets you up and running quickly and accelerates adoption and time to first value

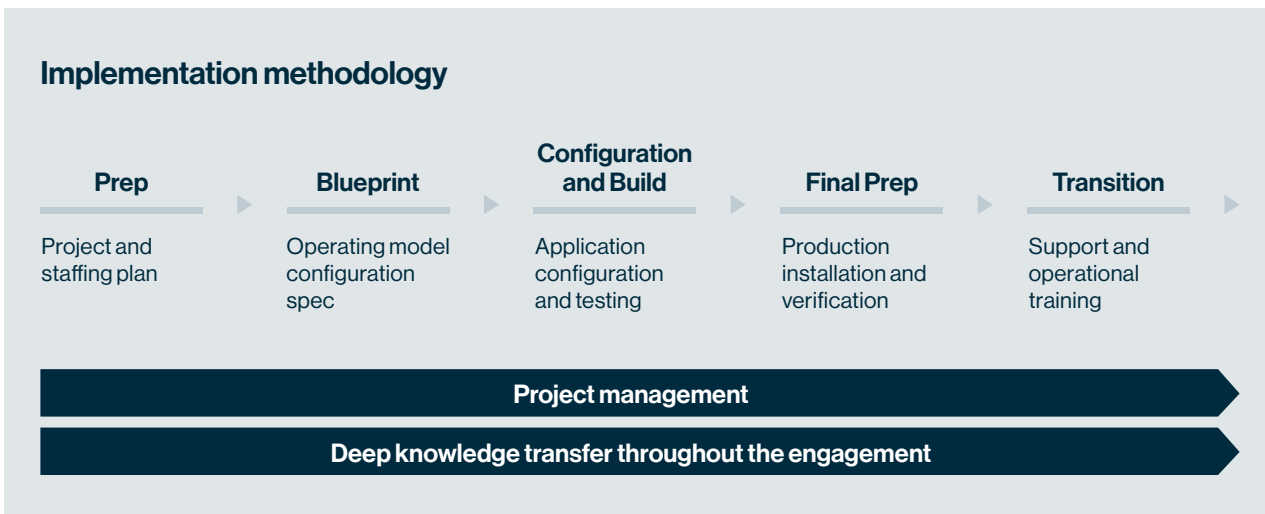

Service Highlights

Business outcome focused engagements

The Collibra Professional Services team offers expertise in mapping your use cases and business requirements to the Collibra Platform, ensuring the platform drives your specific Data Intelligence use cases for measurable results. With deep knowledge of Collibra Platform, the team is uniquely positioned to help you get the most from your Collibra investment.

Proven implementation approach

Our implementation philosophy provides quick value and allows adoption to inform subsequent project iterations. The team delivers rapid implementations, applying proven practices and accelerators from previous implementations, to help drive success with your initial use cases.
